

SYMANTEC PORTFOLIO

QUICK START BY GRADIAN

+44 (0)1276 534771

SOLUTION OVERVIEW

The Gradian Quick Start Service is for customers recognising the importance “best practice” brings to their security posture, ROI and compliance program. Having identified the advantage of your new investment and backed it with the appropriate funding, the next step is to install and configure. Deployed and configured by a Symantec-certified and fully accredited Consultant Engineer, you’re safeguarding your investment from day one. The objective is to ensure your technology is installed and configured in line with best practices which maximises ROI and reduces your risk exposure whilst supporting your existing compliance program.

Starting with a firm foundation of expert configuration means stronger protection and increased peace of mind. Your technology is always running optimally, security gaps are identified and remediated with minimal fuss and internal time and resource constraints are overcome. Using the available services and tools we’ll deploy based on Gradian’s subject matter expertise, knowledge of process mapping and Symantec’s recommended best practices.

Gradian Quick Start Services are ideal for ALL organisations that have recently invested in or are planning on investing in Symantec’s award-winning Mail, Web and/or Endpoint portfolio.

ENDPOINT, WEB & EMAIL HEALTH CHECKS
